B.E. CSE (CSIT) VII Semester Project Acceptance Form

Batch No:

Project Batch Details:

S.No	Name of the Student	Roll No	Signature
1	G.Vishnu Vardhan Rao	2451-23-751-022	
2	Sumedh Meshram	2451-23-751-045	
3	Boddu Yashwanth	2451-23-751-062	

Title of the Project: Agentic AI freelance platform with autonomous agents, RAG, AI team formation, proposal generation, and project management

Domain: Gen Ai and LLM

Abstract: (Minimum 100 words)

Traditional freelance marketplaces suffer from inefficient hiring, vague project requirements, and manual management. This project introduces an autonomous, Agentic AI-powered freelance platform that replaces conventional keyword search with multi-agent orchestration. Built using React, FastAPI, PostgreSQL, and ChromaDB, the system utilizes LangGraph to deploy collaborative agents. Key innovations include an AI Project Generator that transforms informal client text into structured technical requirements, automated AI technical interviewing, and an AI Team Builder that automatically constructs cross-functional freelancer units. By combining vector-based semantic matching with continuous multi-agent project monitoring, the platform automates the end-to-end recruitment lifecycle and optimizes remote software development.

Technologies used:

React, FastAPI (Python), PostgreSQL + Redis, Cloudinary, OpenAI API, ChromaDB, LangGraph, Docker + Render + Vercel

Signature of Internal Guide with Date
